

Startup Website Presentation (English + Slide Format)

Slide 1: Introduction

Hello , good afternoon everyone,

My self smriti jaiswal and I have been born and broughtup in obdeullaganj

I have done my schooling from christ Vidhya bhavan oganj and currently I m pursuing my bachelors degree bca from barkahtullnah university

Alongside my acedemics I m building my skills to become a full stack developer

Today I m here to present a website that I created using html and css

This website is based on a Startup Template from W3.CSS.

Slide 2: Why I Made This Website (Purpose)

This website is designed for a startup or small business to create a professional online presence.

It helps display information like the company overview, team members, pricing, services, and contact details in one place.

Slide 3: What Is Included in the Website?

1. Home Section - A simple welcome message and company name with a background image.
2. About Section - A short description about the company and its mission.
3. Team Section - Introduces team members with photos and roles.
4. Work Section / Portfolio - Shows samples of the company's past projects or services.
5. Pricing Section - Displays different pricing plans for services.
6. Contact Section - A form that allows visitors to send messages or queries.

Slide 4: Technical Details

- HTML - For building the structure of the website.
- CSS (W3.CSS Framework) - For styling and responsiveness.

- The website is fully responsive, meaning it works well on both mobile and desktop screens.

Slide 5: Conclusion

This project helped me learn how to build a clean and responsive website using only HTML and CSS.

It is a perfect starting point for any new business to have a digital identity.

Thank you!

Optional line for extra impact during presentation:

"I created this project not only to showcase my web development skills, but also to understand how real-world layouts are designed for startups."
